Portfolio

SUMMARY

M.Sc. Data Science and AI student with hands-on experience in machine learning, AI applications, and data-driven problem solving. Experienced in developing practical solutions involving semantic search, automation, and intelligent decision-making using modern AI and data science tools.

EDUCATION

Ramakrishna Mission Vivekananda Educational and Research Institute (RKMVERI)

MSc in Data Science, 2025–Present

CGPA – 6.57 (till sem 2)

Bankura Christian College

BSc (Honours) in Mathematics, 2022–25

CGPA – 8.01

Higher Secondary (XII), WBCHSE, 2022
94.8%

SKILLS

- **Languages:** Python, C, SQL
- **ML/DL:** Supervised Learning, Semantic Search, Model Evaluation
- **Frameworks/Libraries:** NumPy, Pandas, Matplotlib, Scikit-Learn, LangChain, FAISS, Dask, FastAPI
- **Tools:** SQLite, N8N, Git/GitHub, VS Code, Excel, Docker, Google Colab

COURSE WORK

- Machine Learning, Artificial Intelligence, Deep Learning, LLM, Agentic AI,
- Probability and Statistics, Linear Algebra
- Distributed Computing, Data Structures and Algorithms
- Database Management System

ACHIEVEMENTS & SCHOLARSHIP

- INSPIRE Scholarship – Govt. of India (Merit-based)
- Qualified IIT JAM 2025 – Mathematics
- Qualified CUET (PG) 2025 – Mathematics
- Qualified CUET (PG) 2025 – Computer Science

CERTIFICATES

- NPTEL – Python Programming
- NPTEL – C++ Programming

PROJECTS

Intelligent Adaptive Learning System for Moodle (Term Project)

Python, Moodle, FastAPI, RAG, Local LLMs, LangChain, Docker July 2026 – Present

Developing an AI-powered learning system that extends Moodle with personalized question generation and adaptive learning based on course content and student performance. Addresses the limitations of static assessments by using instructor-provided material to generate context-aware learning activities. Uses RAG, document processing/OCR, vector retrieval, Moodle APIs, and systematic evaluation of generated questions and LLMs.

AI-Powered Supply Chain Intelligence Agent

Python, SQL Server, Docker, LangChain, LangGraph, RAG Aug 2026 – Present

Developing an AI-powered supply chain agent for natural-language analysis of logistics data and operational insights. Designed to reduce manual SQL queries and dependence on static dashboards by enabling users to interact with supply-chain data using natural language. Ingested 32K+ logistics records into Dockerized SQL Server and built an agentic workflow with LangChain/LangGraph for data retrieval and reasoning.

Distributed Educational Video Search System

Python, Sentence-Transformers, Dask, SQLite Mar 2026 – May 2026

Developed a multilingual search system to find relevant learning content within YouTube videos, motivated by the difficulty of finding specific concepts in long educational videos. Used multilingual embeddings and cosine similarity to match user queries with video transcripts, with Dask for parallel channel processing, semantic caching for repeated queries, and a relevance-based ranking and fallback pipeline to improve search efficiency and reliability.

Spam Email Detection System

Python, Scikit-learn, TF-IDF, Flask Sep 2025 – Nov 2025

Developed an end-to-end spam email classifier using text preprocessing, TF-IDF feature extraction, and machine learning algorithms including Naive Bayes, Logistic Regression, and Random Forest. Compared model performance using standard evaluation metrics and deployed the best-performing model as a Flask web application for real-time prediction.

ACADEMIC RESEARCH

A Study on Countability

B.Sc. Dissertation Feb 2025 – Jun 2025

Studied finite, countable, and uncountable sets through rigorous mathematical proofs, including Cantor's diagonal argument and the countability of N , Z , and Q . Explored foundational concepts of set theory and cardinality in discrete mathematics.
