

SUBHAM DANGAR

MSc in Data Science and AI, RKMVERI, Belur

+91 7029325530 — dangarsubham@gmail.com — LinkedIn — GitHub

SUMMARY

M.Sc. in Data Science and Artificial Intelligence student at Ramakrishna Mission Vivekananda Educational and Research Institute (RKMVERI). Skilled in Machine Learning, Deep Reinforcement Learning, NLP, and distributed AI applications, with hands-on experience developing scalable semantic search systems, autonomous AI agents, and deploying production-ready ML solutions using Python and modern AI frameworks.

SKILLS

Languages: Python, C, SQL

Machine Learning / Deep Learning: Supervised Learning, Semantic Search, Model Evaluation

Frameworks and Libraries: NumPy, Pandas, Matplotlib, Scikit-Learn, Sentence-Transformers, Dask, Flask

Tools: SQLite, Git, GitHub, Docker, VS Code, Excel

EDUCATION

Ramakrishna Mission Vivekananda Educational and Research Institute (RKMVERI) – MSc in Data Science, 2025–Present, CGPA 6.3 (till Sem 1)

Bankura Christian College – BSc (Honours) in Mathematics, 2022–25, CGPA 8.01

PROJECTS

Crop Disease Detection using Remote Sensing Images

Python, PyTorch, CNN, OpenCV, NumPy

Feb 2026 – Apr 2026

- Developed a CNN-based system to automatically detect crop diseases from remote sensing images by implementing image preprocessing, data augmentation, model training, and performance evaluation using standard classification metrics.

Repository-Aware Autonomous Coding Agent

Python, Flask, Ollama, Sentence-Transformers

Ongoing

- Built a fully local autonomous coding agent that understands software repositories and automates code generation, editing, and testing using semantic retrieval, safe code modifications, iterative execution, and local LLMs via Ollama.

Distributed Educational Video Search System

Python, Sentence-Transformers, Dask, SQLite

Mar 2026 – May 2026

- Developed a multilingual video retrieval system that returns the most relevant educational video timestamps by combining sentence-transformer embeddings, cosine similarity, parallel search with Dask, and semantic caching.

Spam Email Detection System

Python, scikit-learn, TF-IDF, Flask

Sep 2025 – Nov 2025

- Developed an end-to-end spam email classifier for real-time prediction by implementing text preprocessing, TF-IDF feature extraction, model comparison, and deployment through a Flask web application.

ACADEMIC RESEARCH

A Study on Countability – B.Sc. Dissertation

Feb 2025 – Jun 2025

- Studied finite, countable, and uncountable sets with formal proofs, including Cantor's diagonal argument and the countability of the natural numbers, integers, and rational numbers.

COURSE WORK

Machine Learning, Artificial Intelligence, Deep Learning, Large Language Models, Agentic AI, Probability and Statistics, Linear Algebra, Optimization, Distributed Computing, Data Structures and Algorithms

ACHIEVEMENTS AND SCHOLARSHIPS

- INSPIRE Scholarship – Government of India (Merit-based)

CERTIFICATIONS

- NPTEL: Python Programming – Ranked in the Top 2%
- NPTEL – C++ Programming
